For Successful Fleet Management

Key Benefits

Improved Response Times

"In emergency call outs we can now use the OnLineAVL solution to dispatch the nearest vehicle reducing our response times for our customers."

Increased Efficiency of Workforce

"Navman's Fleet Management solution allows us to co-ordinate our daily staff logistics and has improved the efficiency of our workforce. It has enabled us to improve our labour productivity to help reduce cleaning costs for our customers."

Reduced Communication Costs

"The ability to track real-time has eliminated the need to place calls into the workforce to find out where they are and how long they will be from a customer site. We are now able to find out at the touch of a button."

More informed decision-making

"With real-time information and historical reporting we can measure the actual workable capacity available and the overall workload. When the workload exceeds the workable capacity of the fleet, we can add more staff knowing that we have already made beneficial adjustments to make the fleet as efficient as possible."

"Greater management control through real-time visibility of our workforce"

Alex Kinsella, Service Systems Manager, Walter Broadley Machines Ltd
